

How to Upgrade macOS

Appalachian State University's IT currently follows the model of supporting the latest released version of macOS (following an internal testing period) and one version previous.

The currently supported operating system versions are:

- **Coming Soon: macOS 13 (Ventura)**
- **macOS 12 (Monterey)**
- **macOS 11 (Big Sur)**

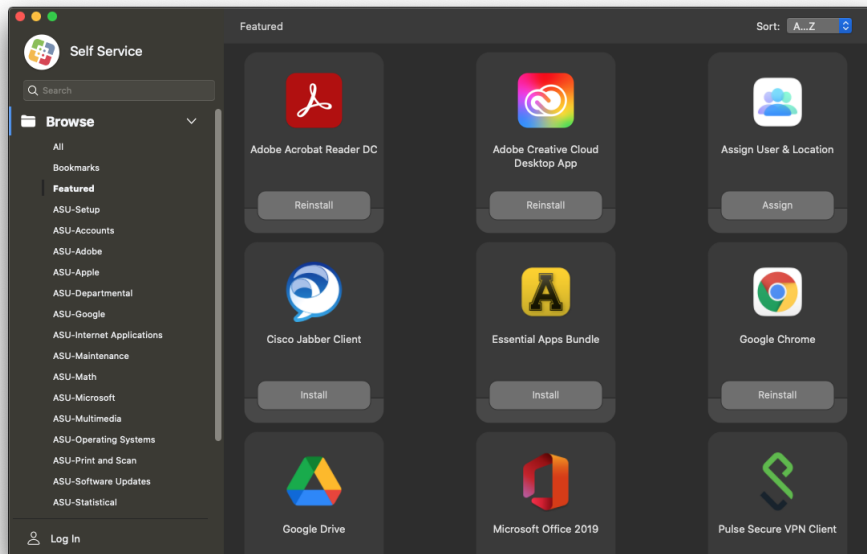

If your device is eligible for an upgrade, you may have received a macOS Upgrade Notification. You can view the [macOS Upgrade Notifications](#) article for more information about the notifications or continue with the steps below to upgrade macOS:

WARNING:

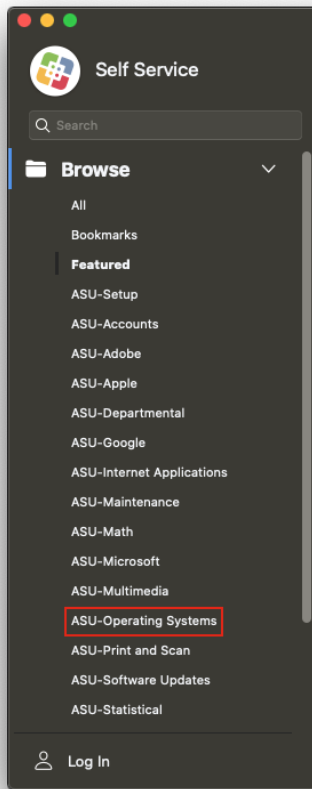

While generally very safe, upgrades do run a minimal risk of data loss. Please ensure your data is backed up to another location before initiating any upgrade. One of our Desktop Support Specialists will be happy to assist with this process. Please visit tech.appstate.edu and submit a request for [Computer Support](#).

Installing an Upgrade from Self Service

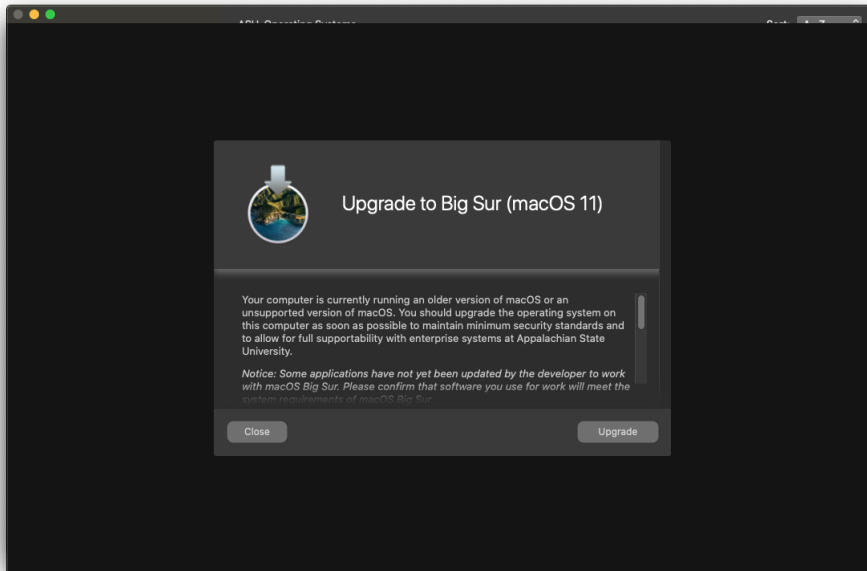

1. In your Applications folder, launch the [Self Service](#) app.

2. You will be greeted with the **Featured** page that shows new or recommended apps. From the **Categories** on the left, navigate to **ASU-Operating Systems** and select an upgrade option that is available from the list.

3. Before proceeding, read the description which will detail any requirements or recommendations.

4. Click the **Upgrade** button to begin upgrading your Mac.

Important:

When you initiate an upgrade, your Mac will download the necessary components and will need to restart to perform the installation. Before proceeding, save your current documents, quit any open applications, and copy all files and user data to another computer or backup drive. If this is a laptop, please connect to a charger at this time. This process could take an hour or more to complete and your Mac will be unavailable during this time.

5. Self Service will prompt you one last time before it will initiate the upgrade. You will not be able to downgrade to a previous operating system once you upgrade.
