

# Confluence Errors with Scaffolding and Comala Workflows

## Problem

1. You get a duplicate key error when saving a new Confluence page based on a template with Comala Workflows and Scaffolding with a file name
2. When saving a Confluence page based on a template with Comala Workflows and Scaffolding, you get an error that changes will not be saved

## Solution

1. If you create and then save a Confluence page based on a template with Comala Workflows & Scaffolding, and see this duplicate key error:

Oops - an error has occurred

System Error

...

### Cause

org.springframework.dao.DataIntegrityViolationException: Hibernate operation: could not execute statement; sql=n/a; SQL []; ERROR: duplicate key value violates unique constraint....

reload or refresh the page by selecting F5. The page was created.

## Solution

2. If you Edit Contents of a Confluence page with a Comala Workflow and a Scaffolding and see an error that navigating away from the page will lose all changes, ignore it. Changes will be saved. This is a Known Bug in Scaffolding that we are watching for a resolution.
