

# Rhino 3D Modeling

## Website

[rhino3d.com](http://rhino3d.com)

## Summary

Rhino, also known as Rhino 3D or Rhinoceros, is a popular 3D modeling software that provides a versatile and intuitive environment for creating, editing, and analyzing complex 3D models. Rhino supports various modeling techniques such as free-form sculpting, surface modeling, solid modeling, and mesh modeling. Users can create 3D models from scratch or import existing models from other software applications.

## Who can use this service?

Faculty in the Art Department

## How do I request a license?

Rhino8 should be available for Applied Design and Art. It will be installed in the labs and the students will be able to install on personal computers if taking the class.

Please contact the Chair or Administrative Assistant in the Art Department to inquire about license availability.
