Remotely Connect to a Campus Computer from macOS into macOS

Instructions for connecting to a campus computer from an off-campus location when both computers have a macOS operating system.

() You must be connected with <u>AnyConnect</u> to make this connection

First, you must configure the campus computer to accept incoming connections:

• In the top left, Click the Apple icon from the menu bar, and open System Preferences from the drop-down menu.

• Open Sharing.

• Check the Remote Management box, and enable all of the options in the pop-up screen below:

Note the device's listed IP address. You will need this to establish the connection from the remote computer. Additionally, you can find the IP address of any macOS computer by following the steps below:

To find an IP address:

1

• Open System Preferences and click on "Network"

• The IP Address will be found here:
